

# KolHaNitzachon IVR Testing Guide

## Purpose

Validate the IVR donation workflow before production.

## Prerequisites

API running; SignalWire configured; Azure Blob configured; Sola sandbox key configured; sandbox test card when available.

## Flow Tested

1. Main Menu
2. Donate
3. Sponsor All/Recipient
4. Donation Amount
5. Confirmation
6. Card Number
7. Expiry (MMYY)
8. CVV
9. Billing ZIP
10. Payment Processing

## Validation

Use GET /api/ivr/debug/session/{callSid} after each step to verify session values. Confirm Azure prompt URLs are generated correctly and uploaded recordings are accessible. Final production validation requires Azure storage access (or confirmation of uploaded audio assets), approved Sola sandbox test card, and complete SignalWire end-to-end call testing.
